

## My favorite stud finder

The ProSensor 710 is unique in the world of stud finders because instead of just one little light that tells you where studs start and stop, it has 13! Wherever there's wood, lights fire up to mark the exact width of the stud. No more guessing. I've always been skeptical about stud finders because I've always found them frustrating and unreliable. Not this one! Buy one at [amazon.com](https://www.amazon.com) for \$50, or check it out at [franklinsensors.com](https://www.franklinsensors.com).
